What Can Certified Safety Do For You?

Safety Program Management

Develop, coordinate, and manage EHS policies, programs, training, and reporting processes. Implement successful accident and cost-reduction strategies.

Training

Prepare and present on-site or on-line regulatory training on a wide variety of topics such as: Hazard Communication, PPE, Lockout/Tagout, Powered Industrial Trucks (Forklifts, Scissor lifts, and Pallet Jacks), Hearing Conservation, Hazardous Waste Management (RCRA), DOT Hazardous Materials Shipping, Stormwater management, Spill Prevention, Control, and Countermeasures (SPCC), Confined Space Entry...and more!

Computer Based Training (CBT)

Develop unique client-focused, computer-based training programs that are vastly superior and far more engaging than all other "off-the-shelf" safety video programs. These CBT's are custom-tailored to each facility's needs and include quizzes and other learning opportunities to engage your employees and ensure understanding of the subject matter.

Injury Reductions & Worker's Comp Savings

Reduce OSHA recordable injury rates by implementing several interdisciplinary programs to increase EHS awareness and communication. Earned multiple Awards of Excellence from the Safety Council of Western New England for incident rate reductions.

Environmental Management

Prepare Tier II reports, annual air emission reports, wastewater monitoring reports, and biennial hazardous waste reports. Develop and update Spill Prevention, Control, and Countermeasures (SPCC) and Stormwater Pollution Prevention (SWPP) plans. Conduct SPCC and SWPP training for employees. Complete electronic Toxics Use Reduction (TUR) and Toxics Release Inventory (TRI) reports through the Massachusetts Department of Environmental Protection's eDEP online filing system.

Experience. Impacts. Results.
